**DETAILED ACTION**

**Amended**

In response to the election in Paper No. 4, this is a restated restriction requirement.

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a method of acquiring an image, classified in class 600, subclass 413.
- II. Claims 25-32, drawn to a method of examination, classified in class 600, subclass 410.
- III. Claims 10-18, drawn to a computer program, classified in class 700, subclass 90.
- IV. Claims 19-24, drawn to an MRI apparatus, classified in class 600, subclass 410.

The inventions are distinct, each from the other because of the following reasons:

Inventions Groups III and IV and Groups I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process can be practiced with another materially different product such as a product capable of reconstructing an image based on at least one R-R interval or on a combination of first and second sets of partial MR image data.

Inventions Group IV and Group III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination has no program to reconstruct an MR image that is a combination of two data sets. The subcombination has separate utility such as a computer program

Inventions Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions Group I does not contain the step of increasing cardiac stress.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Timothy J Ziokowski on 3-18-2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
